5. Claims 1, 3-7, 9-14, 16-22, 24-29, 34, 35, 37, 38, 40, 41, and 43 are allowed.
6. The following is an examiner's statement of reasons for allowance:

Art Unit: 2132

Claims 1, 3-7, and 9-13; and claims 41 and 43 are drawn to a method and program storage device readable by machine tangibly embodying a program of instructions for securely handling an information unit by a first information processing device interoperating with a second secure information processing device, respectively. The closest prior art, Nippon Telegraph and Telephone Corp. (Takashima et al.), European Patent Application Publication No. EP 0 715 242 A1, discloses a similar method and program storage device. However Takashima et al. neither teach nor suggest providing a third key for external authentication and/or release control of the respective information unit. This particular step explicitly recited in independent claims 1 and 41 renders claims 1, 3-7, and 9-13; and 41 and 43, respectively, allowable.

Claims 14, 16-22, and 24-27 are drawn to a system for securely handling an information unit, comprising a first information processing device interoperating with a second secure information processing device. The closest prior art, Nippon Telegraph and Telephone Corp. (Takashima et al.), European Patent Application Publication No. EP 0 715 242 A1, discloses a similar system. However Takashima et al. neither describe nor motivate storage in the first device and/or the second secure device storing at least a third key for external authentication and/or release control of the information unit and processing means processing the third key. This particular feature incorporated in independent claim 14 renders claims 14, 16-22, and 24-27 allowable.

Claims 28, 29, and 34 are drawn to a chip card for securely handling an information unit by interoperating with an information handling terminal device. The closest prior art, Nippon Telegraph and Telephone Corp. (Takashima et al.), European Patent Application Publication No. EP 0 715 242 A1, discloses a similar chip card. However Takashima et al. neither describe nor

Art Unit: 2132

motivate storage storing at least a third key for external authentication and/or release control of the information unit and processing means processing the third key. This particular feature incorporated in independent claim 28 renders claims 28, 29, and 34 allowable.

Claims 35, 37, 38, and 40 are drawn to a chip card accepting device for securely handling an information unit by interoperating with a chip card. The closest prior art, Nippon Telegraph and Telephone Corp. (Takashima et al.), European Patent Application Publication No. EP 0 715 242 A1, discloses a similar chip card accepting device. However Takashima et al. neither describe nor motivate storage storing at least a third key for external authentication and/or release control of the information unit and processing means processing the third key. This particular feature incorporated in independent claim 28 renders claims 28, 29, and 34 allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
